

# Case Study

## Eaton Square, London

---

**Client:** Eaton Square

**Architect:** Eric Parry Architects

**Structural Engineer:** Michael Hadi  
Associates Ltd

**Main Contractor:** Westgreen

**Project completion date:** April 2019

**Project value:** £35,000

**Project type:** Residential Staircase

---

Eaton Square, the largest square in London, got its name from Eaton Hall, a country house owned by the Grosvenor family. The Belgravia district's three squares were all named after places in Cheshire and built by the landowning Grosvenors in the 19th century.

---

### Details of the Design:

The Elite Metal Group worked with Eric Parry Architects to bring their vision of a striking elliptical staircase in the heart of the home from paper to reality.

This luxurious family home in central London required a combination of practicality for family life, accompanied by grandeur that is in keeping with the original design of the building.

### Who is the user?

This staircase sits in the centre of a busy family home so has constant use. The strong, sturdy design is both practical and memorable, just as the brief required.

### Fabrication detail:

This was a visionary project that revolved around a skeletal stainless steel structural frame with complimentary pitted stainless steel sheeting on the undercarriage for maximum impact.

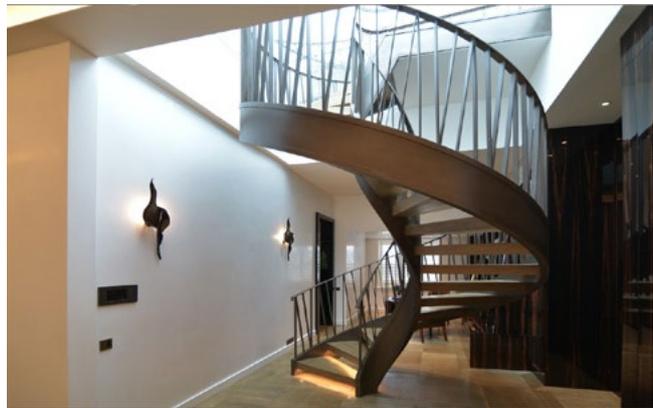

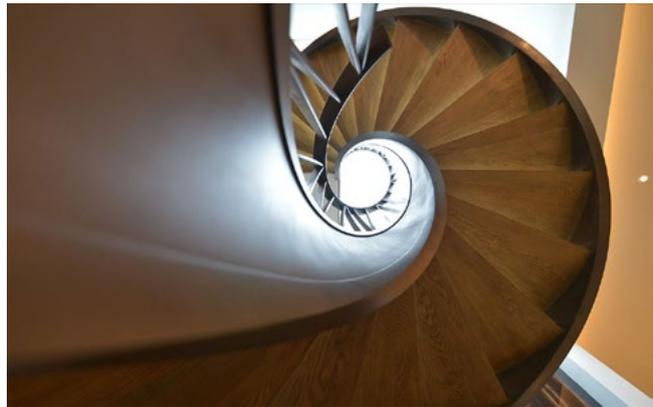

This is a particularly impressive residential building in the heart of London's exclusive Belgravia which is why sumptuous treads and risers were in clad pre-cast terrazzo.

The balustrade is made from stainless steel and capped with a warm bronze handrail that was finished by Paris-based Atelier Mériduet-Carrère in Verde gris.

Our in-house Team oversaw the complete installation of this project. With years of experience the fit-out was quick and the end result simply breath-taking.

**Installation detail:**

Elite's 44,000 square foot Workshop in North West London meant that we were ideally placed to manufacture and install a staircase of this size. We were able to use our own fleet of transport to safely move the staircase across London ready for a timely installation. We even managed to complete this installation ahead of the agreed schedule.

**The finished project:**

This wonderful staircase is the focal point of the family home. The design and seamless installation means that the new staircase looks integral to the original build despite its innovative design and modern materials.
